

Your students already use AI. Your faculty needs to as well.

They use it whether the syllabus mentions it or not. When faculty know how to use it too, the classroom stops pretending, and your graduates arrive ready for a workforce that already expects it. We are opening the Academic Partner Program to **1 or 2 university programs** in healthcare administration or clinical leadership ahead of the September 1, 2026 launch. There is no fee.

THREE WAYS A PARTNERSHIP CAN WORK

Train the faculty

We teach your faculty to teach it, so the AI literacy content lives inside your program rather than depending on us being available.

A custom digital curriculum

Built for one specific class and shaped with your program: the pacing, the assessment, and how it slots into a syllabus that already exists.

Embedded course and credit

Embed the curriculum directly and create a credit pathway for the students who complete it.

WHAT WE ASK IN EXCHANGE

THE WHOLE TRADE

Your program stands behind it, and your faculty tells us what is wrong with it.

We want a real classroom, real students, and honest feedback from the people teaching them. **No fee. No purchase commitment.** In return your faculty gets trained, your students get the literacy the workforce assumes they already have, and the curriculum gets better because of what your program teaches us.

WHY NOW

- 81% of physicians already use AI in their work
- Graduates are expected to use it on day one, without ever being taught
- Students who learn it alone learn it badly, and without guardrails
- Faculty are the gap, and the gap is the one we close

WHAT WE BRING

- A six week core course built on microlearning and retrieval practice
- Lessons of 5 to 10 minutes, one decision per screen
- Every concept taught inside a healthcare scenario, not a generic one
- Governance and HIPAA guardrails taught as part of the work, not bolted on

Nothing here is a fixed package. Tell us how your program actually runs and we will shape the options around it. What gets signed is a short participation agreement covering scope, faculty and student counts, any case study review rights, and confidentiality in both directions. No fee and no purchase commitment. The program does not involve protected health information and does not connect to university systems of record.
